Some benefits are guaranteed and some benefits are variable with returns based on the future performance of your insurer carrying on life insurance business. If your policy offers guaranteed benefits then these will be clearly marked 'guaranteed' in the illustration table on this page. If your policy offers variable benefits then the illustrations on this page will show two different rates of assumed future investment returns, of 8 % p.a. and 4 % p.a. These assumed rates of return are not guaranteed and they are not the upper or lower limits of what you might get back, as the value of your policy is dependent on a number of factors including future investment performance.

**How to read and understand this benefit illustration?**

This benefit illustration is intended to show what charges are deducted from your premiums and how the unit fund, net of charges and taxes, may grow over the years of the policy term if the fund earns a gross returns of 8% p.a. and 4% p.a. These rates, i.e. 8% p.a. and 4% p.a. are assumed only for the

purpose of illustrating the flow of benefits if the returns are at this level. It should not be interpreted that the returns under the plan are going to be either 8%p.a. or 4% p.a.

Net Yield mentioned corresponds to the gross investment return of 8% p.a., net of all charges but does not consider mortality, morbidity charges, underwriting extra, if any, guarantee charges and cost of riders, if deducted by cancellation of units. It demonstrates the impact of charges exclusive of taxes on the net yield. Please note that the mortality charges per thousand sum assured in general, increases with age.

The actual returns can vary depending on the performance of the chosen fund, charges towards mortality, morbidity, underwriting extra, cost of riders, etc. The investment risk in this policy is borne by the policyholder, hence, for more details on terms and conditions please read sales literature carefully.

Part A of this statement presents a summary view of year-by-year charges deducted under the policy, fund value, surrender value and the death benefit, at two assumed rates of return. Part B of this statement presents a detailed breakup of the charges, and other values.
